

GRP 8

OUR HYPOTHESIS (H1)

The geographical location of US Army bases is positively correlated with poverty rates in surrounding areas, such that areas with US Army bases exhibit higher poverty rates compared to areas without.

Null hypothesis (H0)

There is no significant correlation between the geographical location of US Army bases and the poverty rates in surrounding areas.

Alternative hypothesis (H2)

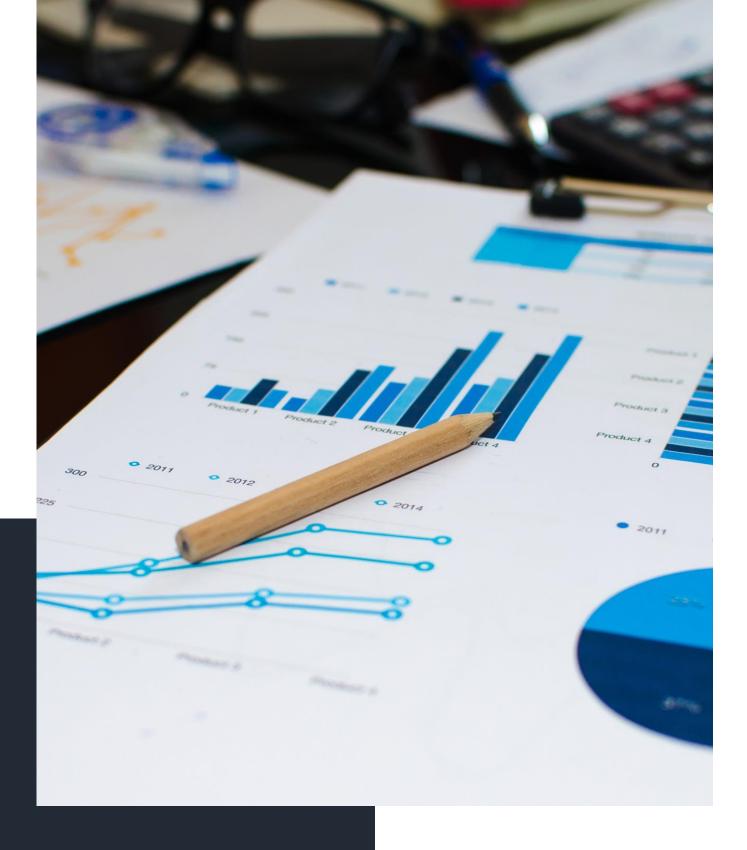

There is a significant positive correlation between the geographical location of US Army bases and the poverty rates in surrounding areas, indicating that areas with US Army bases have higher poverty rates than those without.

PROJECT LIMITATIONS

- We limited the project to the US Army branch only.
- We limited the bases to US Army forts (larges bases) only.
- We located the **nearest town or city** for poverty rates.

OUR DATA SOURCES

We also used **Google** and **ChatGPT** to validate some of the data pulled, to answer questions, and read articles.

US CENSUS DATA

US MILITARY DATA

DATA CLEANSING

- Removed random **symbols**
- Deleted unnecessary **columns**
- Strange code **output** corrected

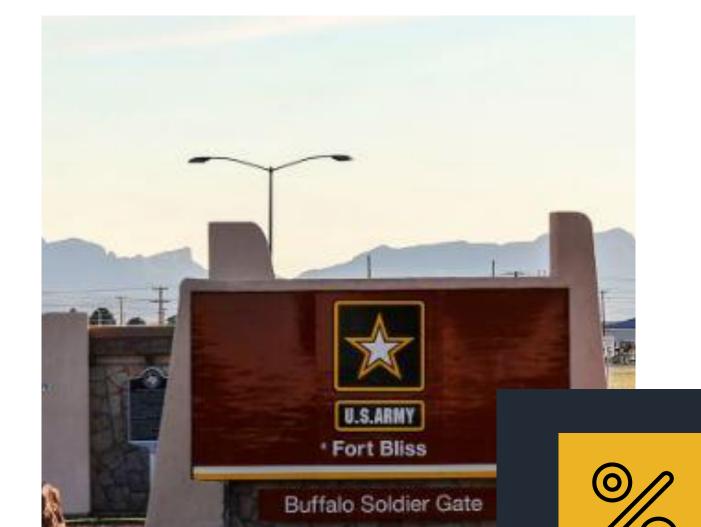

Number of rows in the DataFrame: 27

t[15]:		Name	Household Income	Population	Median Age	Per Capita Income
	0	Fort Novosel	67574.0	5912.0	24.1	22206.0

From 3 percent to 53 percent poverty rate.

POPULATION SPAN

Most bases clustered between 35k and 40k.

DATA ANALYSIS

- **The majority** (19 of 27) of the bases have poverty rates above the national poverty rate.
- **Significant gap** exists between fort with lowest and highest poverty rates.
- Weak negative correlation (-0.39) between population size and poverty rate.
- •Weak positive correlation (0.20) between population size and household income.
